

Innovation leader in serving industry with vibration

“Every day, we strive to live up to our claim that we are the engine of progress in vibration technology. Every day, this is confirmed by the trust and satisfaction of our customers, worldwide.”

Achim Werkmann und Thomas Reis, CEOs

NetterVibration at a glance

- Founded in **1953**
- **Headquarters** in Mainz-Kastel
- **5** further **international company locations**
- **100 employees** worldwide
- **Global distributors** in **25 countries**
- **Leading manufacturer** and **service provider** in the field of **vibration technology**
- Highly efficient vibration technology **“Made in Germany”**
- **Customised** vibration solutions for **any application** in bulk material handling
- Customers from **all industry sectors**

Decades of experience and excellent know-how

The added value of our consulting service

- Customer relations based on a partnership
- Decades of experience and excellent know-how
- Precise understanding of customer requirements
- Personal and individual advice
- Development of customised solutions
- Shortcuts: fast and competent decisions

“We advise our customers individually on site and we jointly develop customised solutions that fit perfectly.”

Fascination for technology with a flair for innovation

The added value of our technical quality

- Excellently trained engineers and application consultants
- Perfectly working supply chain
- Advanced technology and highest quality standards
- Development of individual solutions
- Close cooperation with regional suppliers
- “Made in Germany”

*“From the first sketch
to the last action:
ingenious vibration solutions
at the highest level.”*

Precision in processing for reliable use

The largest selection of industrial vibrators in the world

- More than 3,000 vibrators and impactors
- Vibration technology systems with corresponding accessories
- Individual devices as well as complete vibration systems, e.g. vibrating tables as well as conveyors and dosing systems
- Pneumatically, hydraulically or electrically driven
- Quality, security und reliability
- Innovative design or individualisation according to customer requirements

“Technically well thought-out, excellently processed and absolutely reliable. Our vibrators keep what we promise!”

Efficient application solutions for the entire industry

We are partner of the industry

- Automotive industry
- Construction industry
- Chemical and pharmaceutical industry
- Foundry
- Consumer goods industry
- Plastics industry
- Food industry
- Mechanical engineering

“With our sector insight and extensive market knowledge we are at home in every industry.”

***Moving things is our business.
That's why we succeed with customised
vibration solutions for a wide range of applications.***

Efficient application solutions from A to Z for all industries

Cleaning

Goodbye to bridging and material accumulation: vibrators and impactors ensure reliable knocking off and loosening of build-up and material residues in silos, containers and hoppers.

Compacting

Transport and conveying capacities can be used more efficiently by gaining valuable volume through the compaction of bulk material. This also saves space and, above all, transport and packing costs.

Efficient application solutions from A to Z for all industries

Concrete compaction

No matter if mass concrete or prefabricated concrete parts in the construction industry: fresh concrete becomes airfree in seconds with vibration and is uniformly compacted for perfect strength and stability.

Dosing

With vibration, bulk material can be precisely dosed. This applies to fine powders, pills, granulates, stones and even large automotive components. Our product range also includes dosing stations and conveying systems.

Efficient application solutions from A to Z for all industries

Emptying

Thanks to the impactors and vibrators from **NetterVibration**, goods and bulk materials are completely unloaded from containers, hoppers, silos, wagons and silo trailers. Easily and carefully.

Feeding

With vibration, conveyor systems can be used to gently move material, precisely dose as well as separate. A clear advantage compared to other conveyor systems.

Efficient application solutions from A to Z for all industries

Loosening

No more wedging, jamming or sticking of material during transport, conveying or production of parts, goods and bulk materials. Thanks to the vibrating tables and solutions from **NetterVibration**.

Sieving

Efficient sieving for fast processes and neat results: e.g. when removing fragments from pasta, bringing powder to uniform particle size or separating and sorting types of screws.

Efficient application solutions from A to Z for all industries

Sorting

With the sorting systems from **NetterVibration**, different materials are separated from each other without any effort. By size, type, shape, weight and colour. For effective and accurate production.

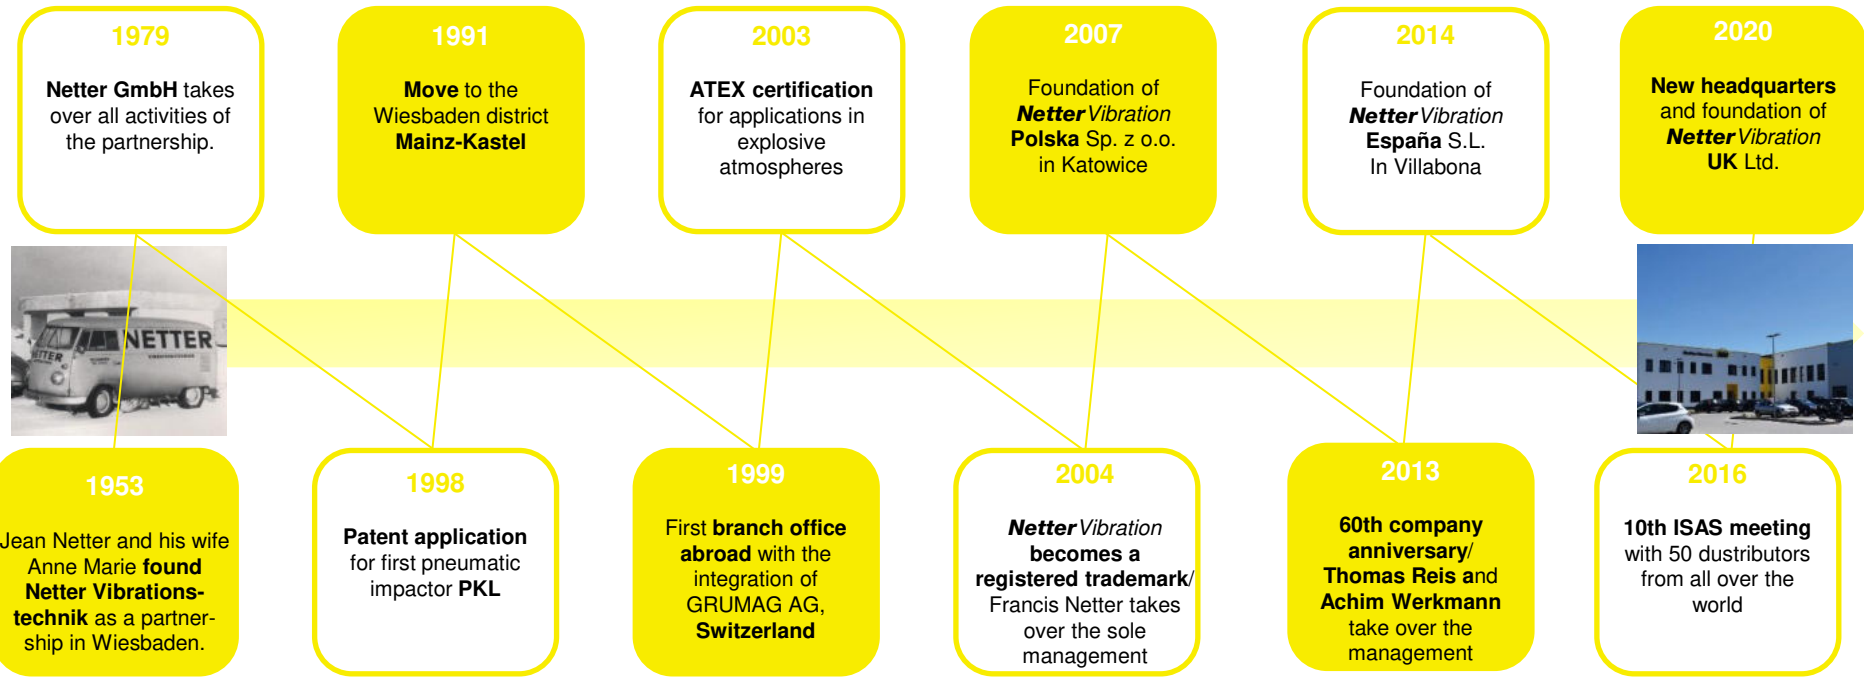

Testing

Goods and components are tested for vibration resistance to ensure their quality. **NetterVibration** offers individual vibration systems, especially developed for testing purposes.

Valuable experience, excellent technical know-how and passionate innovative spirit. For almost 70 years.

Milestones

At your service worldwide
