

## New Packing Line

### Project Description

**PROJECT TYPE:** New packing line and feed systems for kiln dried sand

**PROJECT VALUE:** £300,000 - £500,000

**PROJECT MANAGER:** Mr. Tony Ransford

**PROJECT DESCRIPTION:** GAME laid out the plant using some of the existing equipment, bagging machinery and palletiser. GAME installed the bagging machinery, complete with feed hopper and supporting steelwork, inside the existing building and the conveyor feed system from the sand silos complete with all access platforms. GAME also supplied and installed all of the electric's and control systems. The plant now operates at 300 bags per hour, six days a week all year round. The completion of this upgrade ensures the client can now supply the growing demand for this product, with maximum efficiency and productivity.
