Flexible Connections for Industry Worldwide

Fabric Connectors

Bin Activator Silo Bands

Rubber Sleeves

Product Information

PAR Group are a leading supplier of flexible connections to suit a wide variety of applications across industry. We have the capability to manufacture bespoke flexible connections to suit your individual requirements. This is achieved in a range of materials using in-house facilities including rubber moulding, rubber bonding, TPU polyurethane welding and fabric stitching. Our common types include:

Moulded Rubber Bellows:

Moulded rubber bellows are commonly used in product transfer applications on vibratory equipment. They can be manufactured in various compounds including teracotta, white food quality and blue metal detectable.

Rubber Sleeves:

Rubber sleeves are offered seamless or joined and are manufactured from a range of rubber materials. Our joined rubber sleeves are manufactured using any rubber sheeting in our range and can be reinforced using an external overlap strip.

Fabric Connectors:

Fabric connectors and sleeves are frequently used for product and air transfer applications. PAR can manufacture connectors and sleeves with welded or stitched seams. Wire reinforcements and convolutions can also be added.

Polyurethane Sleeves (Versa-chute®):

Polyurethane sleeves are manufactured using our own in-house welding facilities providing a tough, durable and flexible solution. We have the capability to manufacture sleeves, connectors and chutes in many different shapes and sizes.
